## MySUCCESS

### From Myerscough to Mercedes **Emmie Jones**

I started my Level 3 Extended Diploma with the bare minimum knowledge about motorsport vehicles, but thanks to the unique opportunities offered by Myerscough, I am now employed by a five times World Champion Formula One team.

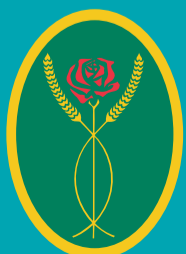

I am currently studying a HNC in Mechanical Manufacturing Engineering, funded by Mercedes AMG High Performance Powertrains. This allows me to work on Formula One engines while on a day release. This involves stripping engines, investigating failures and kitting the dynos as they are passed over from build.

Throughout my apprenticeship I have moved between different departments within the company, including turbo build, energy recovery system servicing and build, pumps and hydraulic build, fabrications and electrical and gearbox build. I've also had the opportunity to work with the Project One car currently being built, which involves the F1 engine in a road car.

None of this would have been possible without the doors opened to me by Myerscough and the fantastic atmosphere on campus. The tutors are all from the industry, and transfer a high level of knowledge as well as support.

My biggest advice to anybody is to take advantage of the opportunities you are presented with and never be afraid to talk to people and ask questions to help you open up a door for your career.
